MAKE SURE YOU DO.....

- It is important to allow the finish on your floor to fully cure; this can take up to 10 days after finishing. To achieve this we advise you do not wet the floor but simply sweep or vacuum (You will be given a 1st clean date, along with recomendation of cleaning & maintenance products suitable for your finish)
- Use a damp cloth to blot spills and spots as soon as they occur. Always avoid allowing liquids to stand on your floor.
- Sweep, dust or vacuum the floor regularly with the hard floor attachment (not the beater bar) to prevent accumulation of dirt or grit that can scratch or dull the floor finish
- Weekly wipe the floor with a damp mop or cloth, micro fibre cloths and mops give the best performance. Using the recommended cleaner for your floor.
- Use protective mats- good quality entry and exit mats will help collect dirt, sand, grit and other substances that can damage your floor. Do not use rubber or foam backed plastic mats as these may discolour your floor. To prevent slippage use an approved vinyl rug underlay mat.
- Use floor protectors on furniture- this will minimise indentations and scratches from heavy objects. As a rule the heavier the object, the wider the floor protector should be.
- Avoid sharp or pointed objects from scratching your floor.
- Watch your pets feet- keep your pets nails trimmed to keep them from scratching the floor.
- In order for your product to perform adequately for years to come it is important that the relative humidity and temperature parameters are between 45 – 65% are consistent within the property at all times. On some occasions properties with poor ventilation or very high levels of heating and insulation can have very low humidity levels, particularly during colder months. In this situation there is a risk of shrinkage and possible even structural deficiencies within the product. A hygrometer is an instrument used for measuring the moisture content in the atmosphere or Fid Box which is fitted under the floor and monitors environmental conditions. If these readings are out of the parameter a dehumidifier would be recommended.

MAKE SURE YOU DON'T

- Use abrasive or solvent based cleaners
- Use steel wall or scouring powder
- Wash, steam or wet mop the floor as this may cause swelling, warping, delaminating and joint separation
- Stick any adhesive tape direct to the floor.

PLEASE RETAIN THIS INFORMATION FOR FUTURE REFERENCE

Customer:

Finish Used: *UV Oil - Hardwax Oil - Lacquered*

1st Damp Clean Date: *10 days after fitting.*

Maintenance Product required: *1.Saicos Wash & Wax Care or 2.Saicos Wash & Refresher*

An effective maintenance regime should consist of:

Dry Cleaning
Floors should be cleaned weekly using cleaning methods, such as vacuum, scissor mop or a soft broom. It is important to remove any abrasive particles of grit and dirt which may scratch the surface when trafficked under footwear, chair legs and other items moved across the floor.

Damp Cleaning
Using the **Spray Mop** is the easiest and most effective way of cleaning wood floors. Simply spray and wipe the floor clean. The Mop Pack includes **full cartridge** of Multipurpose cleaner for oiled or lacquered floors and a spare refill and 2 washable **microfibre pads.**

On going maintenance
Floors finished with traditional oils should be maintained by buffing in the relevant care oil, this can be applied using the **applicator mop** fit with the **applicator pad**. The frequency will depend upon the environment and how often the floor is used. Our maintenance kit comes complete with all your cleaning and maintenance needs.
